**Subject:** RE: Follow up from today's conversations

I reached out to Jess Rowland this morning. He is willing to talk tomorrow, however he has back to back meetings from 9:30 till 11:30 am. He has given me his cell phone number for us to text him once we know what time we would like to meet him. He wanted to check with the Product Manager (PM) for MON102100 (not a good thing...PM likely to deny the meeting). I discouraged him and hopefully he won't check with the PM.

James, see below. I am going to be at EPA Tuesday (arrive Monday afternoon) to talk about glyphosate. Any chance getting a quick conversation with someone on MON 102100 carcinogenicity?

**Importance:** High

Hi Joel and Bill,

I followed up with Susan after our conversation and she agree that a conversation with EPA about 102100 could be very valuable. She would prefer to kill two birds with one stone with Bill's planned trip to DC next week. She proposed Bill having a sidebar conversation with the agency rep handling 102100 or a carc panel member to gather information about where they are currently and what additional data they might want. Also, the conversation could be used to gauge their receptiveness to additional data we have to see if that "keeps the door open".

Separate, but related, do we have the ability to calculate the  $q1^*$  value based on what we currently know about their thinking? Susan would like a high-level, early read on their thoughts on its potency if possible.

Thanks,

Mike
