Subject: Re: alarming news

Dear Conrad,

Thanks for your optimistic notes.

Your music is excellent, I enjoy it as usual with pleasure. M. Brock seems to be a good addition to your band. But even "humorous" Robot piece sounds rather minor, as Homage to California does. Influence of situation?

Are you and Dr. Abrams alone in your current efforts? Is there any tendency to consolidate all sensible scientific ECT forces, who under other circumstances seem conflicting? What is the position and action of MECTA and around?

I think that FDA now takes an examination - whether it is a reasonable and scientifically based body, or an anti-scientific and anti-progress mob. Let it doesn't stumble over ECT problem. Negative outcome may undermine its authority, exaggerated abroad the USA (in particular, in Russia).

When your review of "Struck by Living" will be available?

Best regards,
Alexander
